SUMMARY

Software Engineer specializing in backend development and AI integration. I build APIs with FastAPI, design the SQL models behind them, and integrate LLMs and agentic AI workflows with LangChain. Currently at Meissasoft; earlier experience supporting Oracle FLEXCUBE core banking systems.

SKILLS

Languages: Python, SQL, TypeScript

Backend: FastAPI, Celery, Redis, REST APIs, JWT auth

Data: PostgreSQL, SQLAlchemy, SQLModel, Alembic

AI tooling: LangChain, LLMs, Agentic AI, OpenAI API, Anthropic API

Payments: Finix (card tokenization, subscriptions, webhooks, reconciliation)

Infra: Docker, GitHub Actions, AWS (ECS, RDS)

Earlier stack: C#, ASP.NET Core, Oracle SQL, PL/SQL

EXPERIENCE

Backend Python Developer - Meissasoft (Jan 2026 - Present)

- Build and maintain backend services in Python using FastAPI
- Work with PostgreSQL and other SQL databases for application data
- Build LangChain-based AI features into product workflows
- Run background jobs with Celery and Redis, deployed with Docker

Application Support Engineer - Techlogix (Dec 2024 - Sep 2025)

- Supported Oracle FLEXCUBE core banking modules (CASA, CIF, TD, User Management), including RAD tool customization
- Debugged PL/SQL procedures and backend workflows, and kept data replication consistent across schemas
- Performed EOD operations, upgrade validations, and issue triaging for core banking systems

PROJECTS

TruAris (private) FastAPI, PostgreSQL, LangChain, Celery, Redis, Docker, AWS, GitHub Actions, JWT

- Founding backend engineer: built this fully autonomous, multilingual outbound sales and lead engagement platform from scratch, handling the complete lead lifecycle: cold import, qualification, follow-up, escalation to human reps, and CRM pipeline management
- Own the backend end to end: business logic, multi-tenant Postgres row-level security, Celery workers for prospecting and batch scoring, a LangChain LLM layer switching between OpenAI and Anthropic, AWS deployment, and the GitHub Actions CI/CD pipeline

Diffini (private) FastAPI, PostgreSQL, SQLAlchemy, Alembic, Docker

- Backend for an enterprise change-management platform tracking stakeholders, initiatives, and department-level readiness and impact
- AI-assisted scenario recommendations, with a reporting layer that exports to PDF, Excel, and PowerPoint

Osala (private) FastAPI, SQLModel, PostgreSQL, Finix, Docker

- Designed and built the Classes module (regular classes and workshops) and the audit logging module, and fixed timezone handling issues across the project
- Built a full Finix payment integration: card tokenization, subscriptions, webhook-driven reconciliation, and dispute handling

gfgLock (open source) Python, PySide6, QML, C++, OpenSSL

- Free, open-source Windows file encryption app using AES-256 and ChaCha20-Poly1305 through a native C++ engine built on OpenSSL

github.com/ShahFaisalGfG/gfgLock

CC-Gen-Ultimate (open source) Python, PySide6, QML, faster-whisper, PyTorch

- Free, open-source, fully offline subtitle generator: transcribes with Whisper, translates the result, and can transliterate it into a different script

github.com/ShahFaisalGfG/CC-Gen-Ultimate

EDUCATION

University of Management & Technology

Bachelor of Science in Software Engineering - CGPA 3.34/4.00 - Sep 2024

CERTIFICATIONS

- SQL (Advanced) - HackerRank
